

Rhode Island Manufacturers Green Award

The Rhode Island Manufacturers Association Salutes

TIYODA-SEREC CORPORATION

Recipient of the Rhode Island Manufacturers Green Award

Tiyoda-Serec Corporation (TSC), established in 2002, designs and manufactures equipment which practically eliminates solvent air emissions due to its patented airless vacuum cleaning technology. Over the years, TSC airless systems have been perfected in performance, reliability, and quality. With its closed-loop vacuum processing and built-in distillation for solvent recovery, the systems are known throughout the industry as “The Best Cleaning Systems”, and meet all environmental requirements, have been certified by the most stringent air quality body in the nation. With the growing air-quality concerns and compliance issues facing many companies which use solvents or chemicals in their manufacturing process to clean parts or other substrates, TSC manufactures industrial and precision cleaning systems for multiple industries, including aerospace, optics, electronics, medical, tubing, pharmaceutical, machined parts, filter media, and others. ASME certified to fabricate pressure vessels, TSC now fabricates parts and components which were outsourced in the past. Having recently expanded 10,000 square feet to accommodate future growth and having increased staffing by 25 percent, TSC is well positioned as one of Rhode Island’s leading “green” manufacturers.
